EPPINGER BM bevel gear boxes

The BM series of bevel gear boxes is predestined for all gear box applications which require compact dimensions and maximum torque transfer at best efficiency rates. Precision of the axes and bearing

seats, combined with Gleason bevel gears to take high loads, are the basis for minimized tooth clearance and optimal transmission properties. Presently the gear boxes are available in 5 sizes, each with a ratio of $i = 1 : 1$.

FEATURES AND BENEFITS OF THE NEW BM BEVEL GEAR BOX SERIES

THE HOUSING:

- single-component steel housing with maximum precision of axes and bearing seats, all integrated directly into the housing
- high power density of the gear boxes through compact housing dimensions
- drive-sided gear box interface offers the option of direct connection of planetary gear box pre-stages, as well as secure mounting of motor flanges
- mounting threads on all sides of the housing allow for stable attachment of the gear box in various installation positions

THE GEARS:

- heavy duty bevel gears, designed and manufactured according to the Gleason process, result in optimal gearing efficiency, high transmission precision and reduced stress on the bearings
- friction-locked, zero backlash connection of the crown gears on the drive shaft reduces the mass of the gearing component and centers zero backlash connection

- precise gear setting by measuring the gear box components and 100% running test of the gear boxes in assembly

SHAFTS AND BEARINGS:

- steel alloy shafts with precise bearing seats as basis for precise and heavy duty taper roller bearings
- extremely precise positioning and setting of bearings through the use of ground steel shims and splinting of the inner rings

THE RANGE OF GEAR BOXES:

- presently 5 gear box sizes with a ratio of $i = 1 : 1$
- gear box can be supplied with solid or hollow shafts in standard and customized designs
- best efficiency when high transmission performance is required. High efficiency levels of course result in a reduction of energy costs.

Performance data

	Abbreviation	Unit	Ratio	BM075	BM090	BM110	BM140	BM170	BM210	BM240	BM280
Nominal output torque	T2N	Nm	i = 1 : 1	80	130	300	570	1050			
Max. output torque ¹	T2max	Nm		160	260	600	1140	2100			
Nominal speed	n1N	rpm	i = 1 : 1	1800	1500	1100	900	850			
Max. nominal speed ²	n1max	rpm		3000	2500	2000	2000	1500			
Permissible radial load ^{3, 4}	FR1max FR2max	N N		1500 2000	2000 2700	3500 4500	5500 7200	7800 11000			
Permissible axial load ⁴	FA1max FA2max	N N		800 1000	1000 1400	1800 2300	2800 3800	4000 5500			
Tooth clearance output shaft	jt	arcmin arcmin	standard reduced	≤13 ≤ 8	≤12 ≤ 7	≤11 ≤ 7	≤10 ≤ 6	≤10 ≤ 6			
Efficiency at nominal load	η	%					> 98				
Operating noise ⁵	Lpa	db(A)		70	73	75	76	77			
Service life	Lh	h					> 15.000				
Oil filling ⁶		ltr		0.06	0.09	0.16	0.35	0.80			
Lubrication							Synthetic oil, ISO VG 150 (up to size 140 incl.)				
Operating temperatures		°C					-30 to 100				
Weight ⁷		kg		5.5	8.9	15.7	31.1	48.0			
As-delivered condition							Housing and flanges burnished black

Thermal limit rating

	Abbreviation	Unit	BM075	BM090	BM110	BM140	BM170	BM210	BM240	BM280
Thermal limit rating ⁹ ⁹ at T2N, i = 1:1, RT=20°C and ED = 100%	Ptherm	kW	5.0	7.5	11.0	18.0	26.5			

Definition: the thermal limit rating Ptherm is the transferable output during continuous operation at a max. permissible oil bath temperature of 90 °C. The permissible limit values for the thermal limit rating for intermittent operation can be determined as reference values as a function of rotational speed n1 and ambient temperature by applying the correction factors given below.. In this context the effective output must not exceed the permissible limit values.

Ptherm, effective < Ptherm, permissible

Example:	Gear box	Revolution speed	ED	Ambient	Drive speed [rpm] Correction factor K1	0.4*n1N 1.0	0.7*n1N 0.8	n1N 0.5		
					Switch-on time ED [%] correction factor K2	100 1.0	80 1.2	60 1.4	40 1.6	20 1.8
Permissible thermal limit rating at: Ptherm,permissible = Ptherm (BM140) x K1 x K2 x K3 = 18.0 kW x 0.8 x 1.2 x 0.8 = 13.8 kW	BM140 1 : 1	560 rpm	80%	40°C	Ambient temperature [°C] correction factor K3	10 1.20	20 1.00	30 0.83	40 0.70	50 0.60
						1.20	1.00	0.83	0.70	0.60

EPPINGER precision gear boxes at a glance

Our product range includes besides **bevel-, hypoid-, planetary- and cycloidal gear boxes** also **special customized gear boxes and high precision gear technology**. With our **gear motors** and **integrated combinations of our gear box series** we extended our portfolio. The **compact mono-bloc design** as well as our maximum **gear quality** makes our solutions **unique**.

Ordering code

	Type of gear box	Size	Type of shaft	Ratio
Example for ordering: BM110 S13 1:1	BM	075 090 110 140 170 (210) (240) (280)	S01 - Solid shaft side 1 S03 - Solid shaft side 3 S13 - Solid shaft sides 1+3 H13 - Hollow shaft sides 1+3	i = 1 : 1
Upon request: motor flange, different shaft dimensions, customized solutions, fittings,....				
Subject to change in design. We recommend technical clarification prior to ordering.
